WELCOME TO COMSTAR SYSTEMS

Comstar Systems is a dynamic, Australian-based company, operating on the local, national and international stage.

A full service construction company, Comstar Systems provides a diversely skilled workforce, specialising in telecommunications, broadcasting and renewable energy.

Comstar Systems has worked with major telecommunications companies, radio and television stations, internet service providers, commercial clients, and local, state, federal and international government agencies.

OUR PHILOSOPHY

We believe access to communications and sustainable power is fundamentally essential for future social and business development.

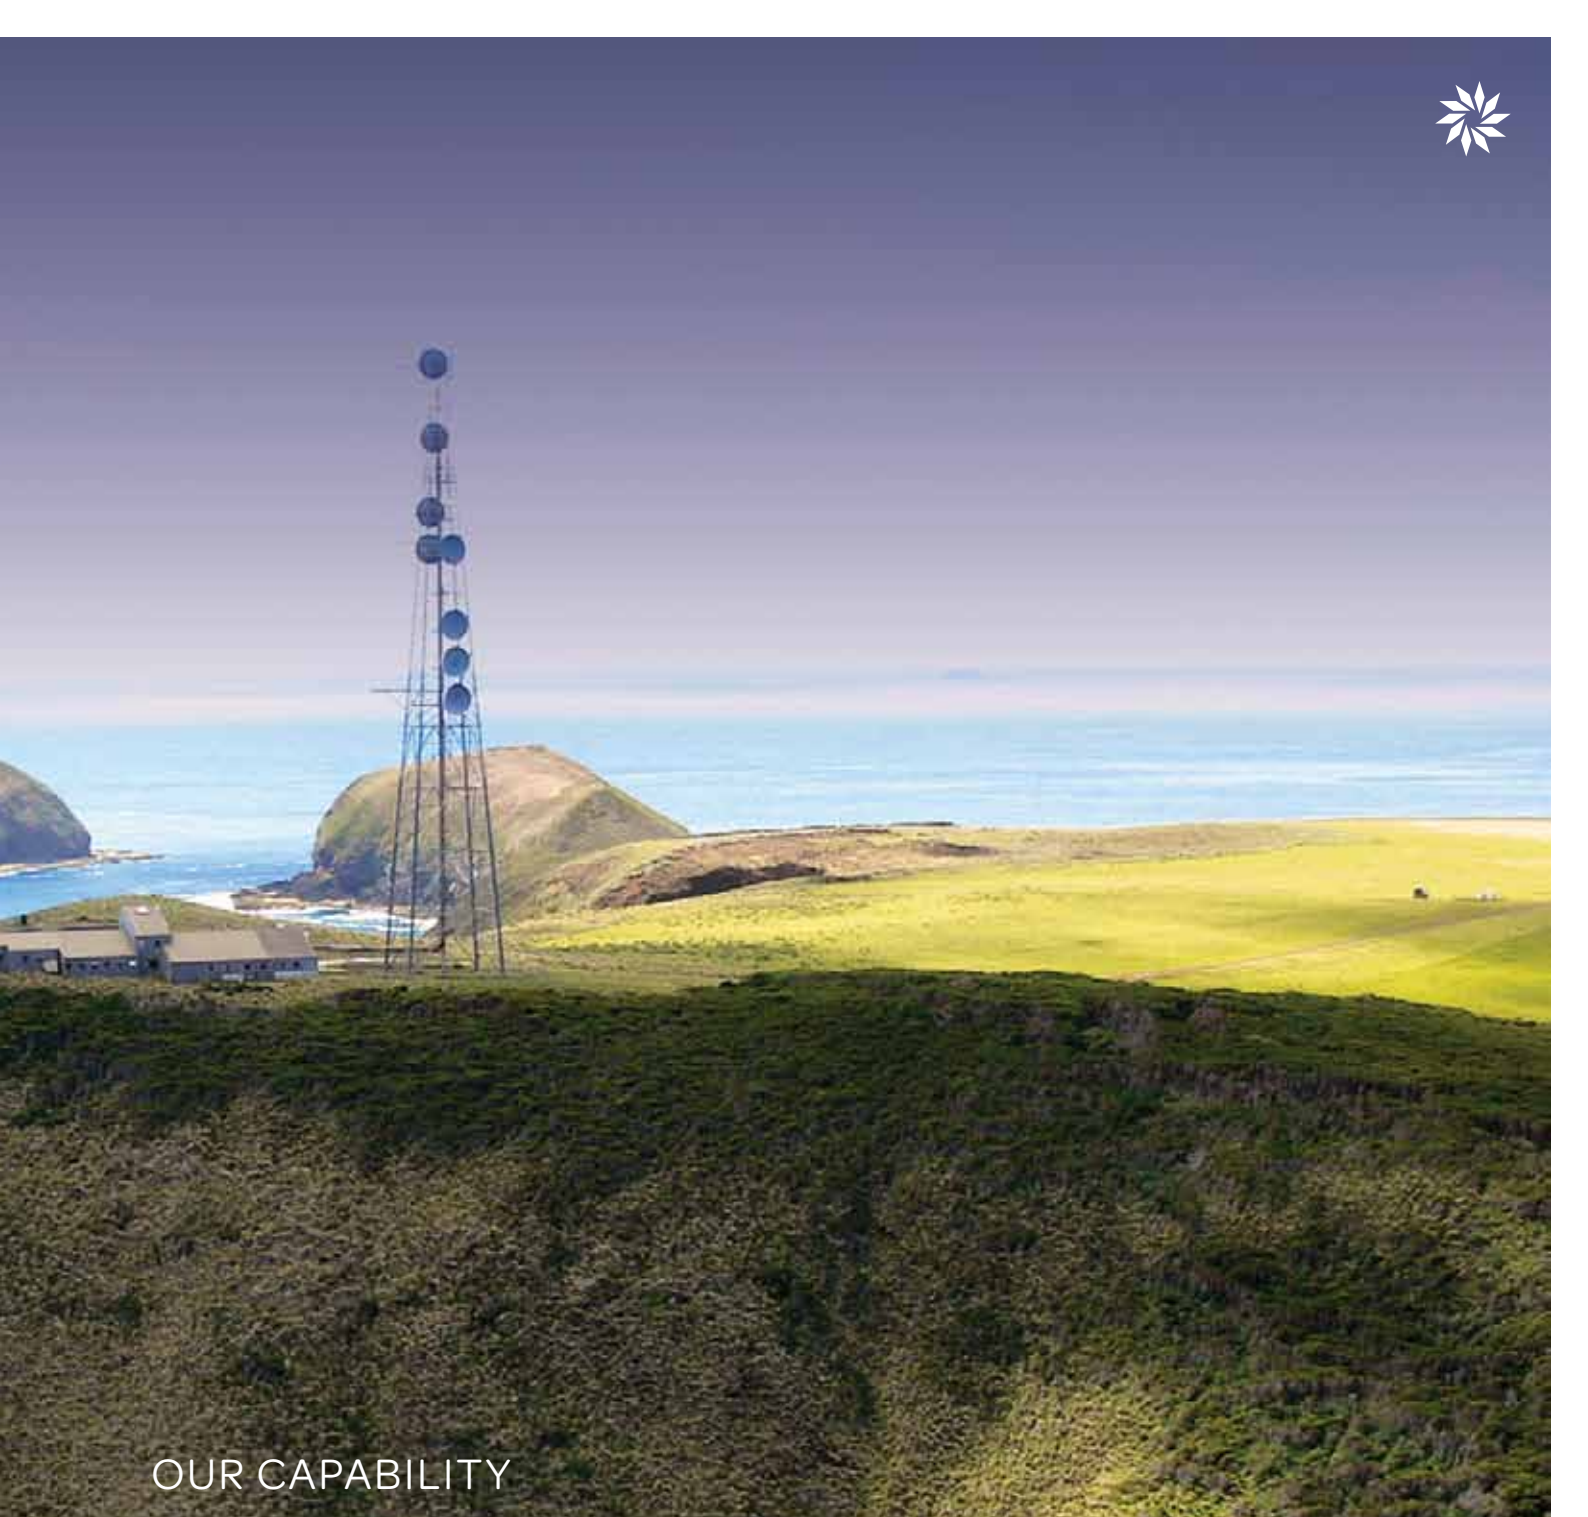

Through providing a depth of industry knowledge and delivering compelling services, Comstar Systems is committed to improving the lifestyle of individuals, communities and businesses alike.

OUR HISTORY

Comstar Systems was formed in 2009 by a group of industry professionals through the management acquisition of the telecommunications business component of Powercom Systems, including the transfer of all employees, assets and major communications contracts. By this process, we have ensured we are equipped to provide our clients with extensive resources and a high level of technical expertise.

Our company structure ensures financial due diligence, strategic direction and quality management.

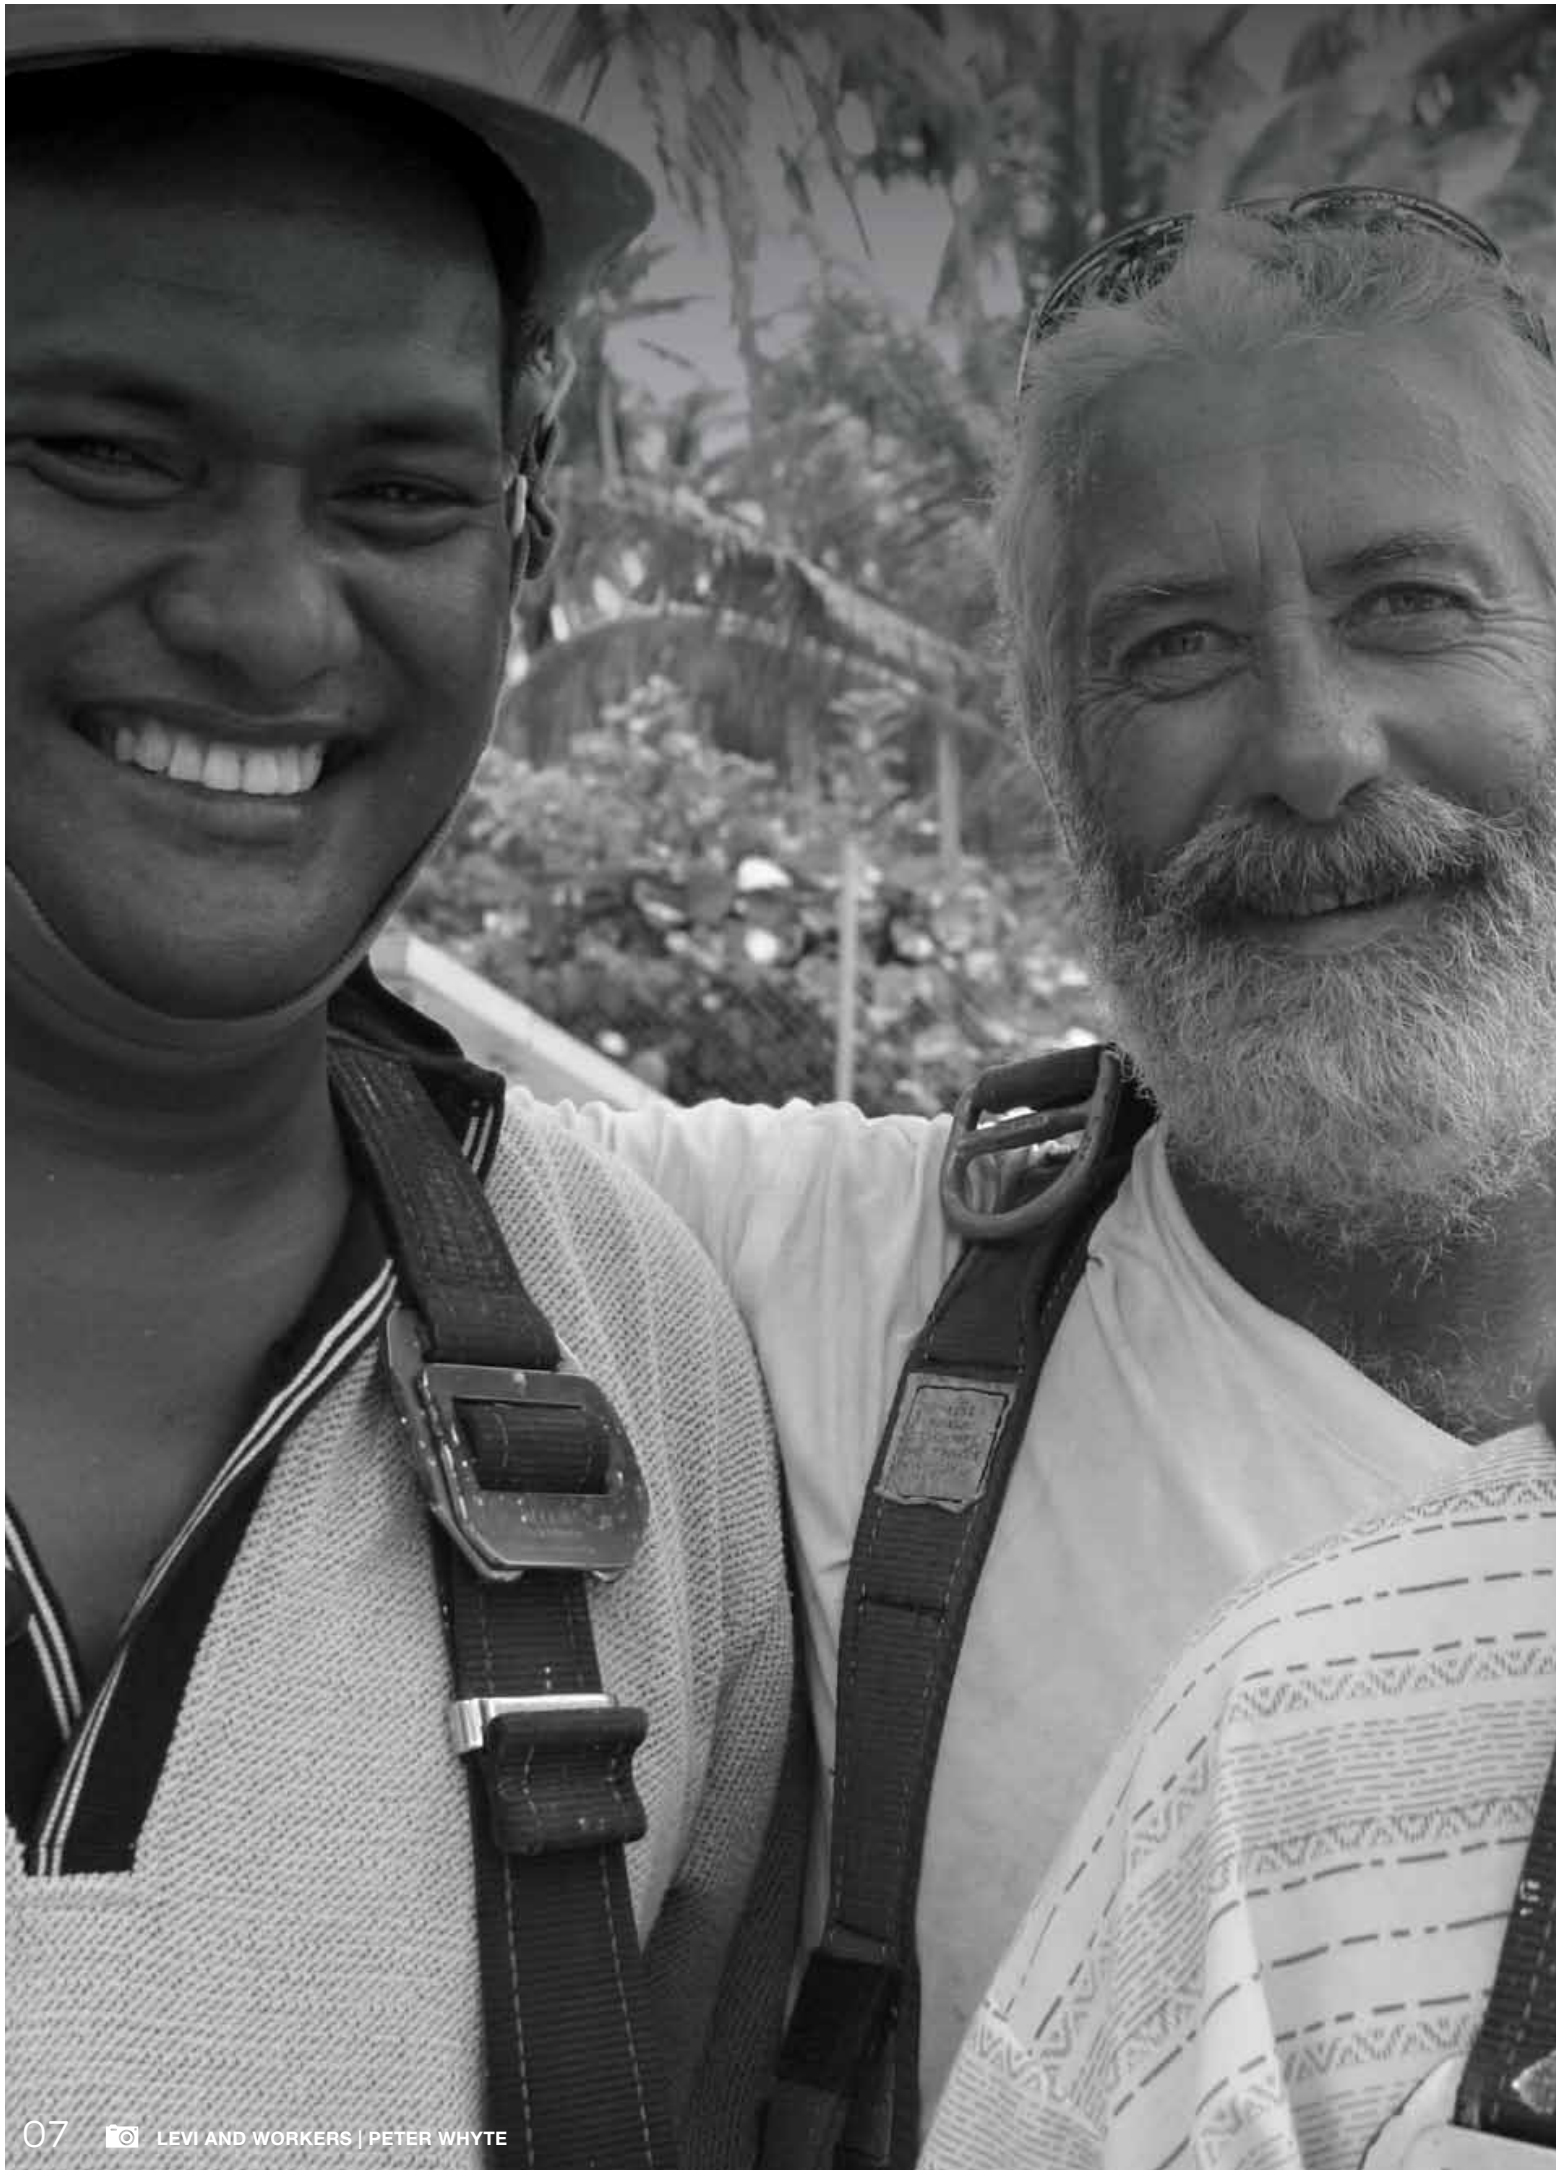

OUR CAPABILITY

We offer a depth of industry experience and unmatched quality of service from our multi-skilled team which includes experienced communications engineers, designers, technical officers, riggers, project managers and electrical contractors.

We provide a comprehensive range of services incorporating site acquisition, environmental planning, design, civil construction, logistics, project management, installation, commissioning, and integration of communications and renewable power systems. We also offer services in the maintenance of communications towers and

equipment, unified communications systems, customer wideband and broadband systems, stand-alone and grid-connect power systems and remote telemetry.

We have extensive remote-area experience in Australia, as well as the Pacific Islands, Africa and Asia. We have the ability to quickly mobilise both interstate or overseas to assist our clients to manage or complete projects.

OUR PEOPLE

Our people are our strength.

We recognise, value and understand the vital contribution our employees provide towards our business growth.

Comstar Systems is a thinking company that supports a multidisciplinary structure. Our employees are encouraged and fully empowered to make positive contributions to improve outcomes for our customers.

We are committed to providing a workplace that values knowledge, quality service delivery, safe work practices and team spirit.

OUR FUTURE

We will continue to build a dynamic, progressive and forward-thinking workforce, ready to encompass changes to technologies into our skill base.

We will seek out complementary business associations that are mutually beneficial to both parties' objectives, while broadening the scope of services we can provide.

We will continue to build on our reputation as a visionary company operating in a pioneering industry in the ever-changing world climate.
